Lead / Senior Software Engineer | AI/ML, Fintech & Cloud Platforms

Seasoned Software Engineer with 10+ years of experience designing and building enterprise fintech platforms and cloud-native systems across payments, lending, recoveries, rewards and large-scale data systems. Proven track record architecting high throughput transaction processing systems, real-time ledger integrations and distributed services operating under 99.99% SLA requirements. Deep expertise in AWS platform engineering, CI/CD modernization and scalable event-driven architectures supporting high volume financial workloads. Passionate about financial technology, digital assets, blockchain systems and emerging AI driven platforms.

TECHNICAL PROFICIENCIES

Languages: Java, Python, Kotlin, Go, TypeScript

Cloud Platforms: AWS (Certified), GCP, Azure

AI / ML: OpenAI API, AWS Bedrock, Claude API, Vector Databases, RAG pipelines

Infrastructure: Terraform, CloudFormation, Kubernetes, Docker, Artifactory, Nexus

Databases: Snowflake, PostgreSQL, Cassandra, Oracle, MongoDB, DynamoDB, Elasticsearch

CI/CD: Jenkins, GitHub Actions, GitLab CI, Azure DevOps

Monitoring & Observability: New Relic, CloudWatch, Splunk, Datadog

Blockchain / Web3: Distributed ledger concepts, digital asset platforms, smart contract fundamentals

PROFESSIONAL EXPERIENCE

Ippon Technologies USA – Richmond, VA
Senior Software Engineer

Jun 2021 to Apr 2026

Senior DevOps Consultant – Stride

Aug 2025 to Apr 2026

Develop cloud native platform infrastructure supporting PowerSchool reporting and enterprise data workflows while driving AWS infrastructure automation and CI/CD modernization using Terraform and GitHub Actions. Contribute to platform engineering initiatives including developer tooling, service templating and standardized deployment workflows through Spotify Portal.

- Designed and delivered custom PowerSchool reporting dashboards.
- Automated AWS infrastructure provisioning using Terraform managing IAM roles, SSM Parameter Store, Secrets Manager, S3 and SQS for secure and consistent deployments.
- Integrated Spotify Portal to support service templating, configuration management, feature flagging and developer self service workflows.
- Standardized Python packaging and CI/CD workflows, implementing Nexus artifact publishing with semantic versioning and tag-based release automation.

Lead Engineering Consultant – Capital One

July 2023 to July 2025

Led backend platform integrations supporting Capital One's Shopping and Credit Card Loyalty platforms. Designed distributed system integrations enabling real time transaction ingestion, rewards eligibility evaluation and customer engagement workflows.

- Designed and implemented event-driven transaction ingestion pipelines integrating Capital One Shopping with the enterprise credit card rewards platform.
- Enabled reliable synchronization of transaction events with the rewards ledger to ensure accurate reward calculation and eligibility determination.

- Led end-to-end integration between the Capital One Shopping platform and loyalty services, enabling automated reward-triggered customer engagement workflows.
- Managed and enhanced the Loyalty Policies API responsible for determining earning rates and reward eligibility across multiple credit card programs.
- Delivered platform enhancements supporting Discover account onboarding and expansion of cross-network rewards eligibility processing.

Cloud Engineering Consultant – U.S. Government Entity

May 2023 to July 2023

Developed serverless data processing solutions on AWS supporting AI powered document ingestion and OCR extraction.

- Developed AWS Lambda functions using Python and SQLAlchemy to transform OCR-extracted billing data into structured XML payloads, enabling automated downstream processing and improved data standardization.

Software Engineering Consultant – Mission Lane

June 2022 to Feb 2023

Engineered backend microservices supporting customer communications platforms and third-party service integrations.

- Built Kotlin-based Spring Boot microservices to support customer communication services.
- Provisioned AWS and GCP infrastructure using Terraform to enable scalable and reliable microservice deployments.
- Integrated messaging platforms including Braze, Customer.io and Twilio to enable automated, multi-channel customer engagement workflows.

DevOps Consultant – Koalafi

July 2021 to May 2022

Designed and implemented DevOps solutions supporting containerized application development and Kubernetes based deployment workflows using Azure DevOps CI/CD pipelines.

- Built standardized containerized Python build environments using Conda/Anaconda integrated with Azure DevOps pipelines and enabled Kubernetes deployment workflows improving scalability and consistency across environments.
- Implemented CI/CD quality controls, including automated testing, security scanning, logging and monitoring.
- Optimized container images and build processes to support faster and more reliable deployments.

Capital One – Richmond, VA

Software Engineer

Nov 2015 to May 2021

Designed and built distributed backend systems and data pipelines for enterprise financial platforms, focusing on high-volume transaction processing, resiliency and event-driven architectures.

- Engineered cloud-native, distributed backend services for enterprise payment and recoveries platforms, supporting high-volume financial transaction processing and streamlining collections workflows.
- Built backend services for enterprise document imaging systems, enabling ingestion and retrieval of financial documents for collections and recoveries operations using Elasticsearch and S3 across three systems of record.
- Built event-driven data pipelines using Kafka and Spring Boot to process and synchronize financial transaction data across distributed services.
- Developed RESTful APIs backed by MongoDB, Cassandra and PostgreSQL supporting scalable financial services applications.
- Engineered payment processing services enabling real-time “open to buy” credit availability, allowing customers to regain spending power immediately after payment initiation without waiting for traditional settlement cycles.
- Owned resiliency strategy for enterprise payment APIs operating under ~99.99% SLA, improving reliability and failure recovery across distributed systems.
- Led production incident response, root cause analysis, and disaster recovery exercises for mission-critical payment infrastructure.

EDUCATION

Bachelor of Science in International Business

Minnesota State University Moorhead (2010 – 2014)
